#### **ABSTRACT**

Survey-71 was initiated to learn more about graduates of State University College in Fredonia, New York. Data was compiled on how students viewed their college education, their activities and interests while attending Fredonia, the influence of a college education on their lives and activities after leaving college. This document contains interpretation of these topics. Fredonia data has been reported by the three academic areas of the college programs which are: arts and sciences, fine and performing arts, and professional studies. This breakdown provides an opportunity to interpret areas independently and to compare data with other major divisions within the college program. Further comparison to a national study by the American Council on Education is provided in the reference tables. For analysis with a national sampling of college students, the tables designate the sex of the respondents. The survey forms used in both studies include many identical items for comparison, since the national questionnaire was adapted for the Predonia study. (Author)

#### **FOREWORD**

SURVEY - '71 was initiated to learn more about graduates of SUC, Fredonia. Data was compiled on how students viewed their college education, their activities and interests while attending Fredonia, the influence of a college education on their lives and activities after leaving college. The questionnaire was an adaptation of one used by the American Council on Education (ACE).

The first report, SURVEY - '71 OVERVIEW, provided a view of the students under the single category of "graduates." This report, SURVEY - '71 FOLLOW-UP, considers the students by enrollment choice in major academic areas. In addition, respondents are divided by sex for comparison with the national (ACE) survey "Four Years After College Entry."

The reports provide reference points for future study of graduates and planning for educational programs at the undergraduate level.

Appreciation is extended for the help and support of many people: Dr. Dallas K. Beal, President, SUC, Fredonia; Dr. Ronald E. Hull and Dr. Madan Mohan, Teacher Education Research Center staff members. Secretaries, Mrs. Marian Anderson, Miss Christine Halas, and Mrs. Gertrude Reep, were most helpful in preparing this report.

A special "thank you" to the graduates who took the time and made the effort to respond to the questionnaire. Without their help, the reports would not have become a reality.

Kenneth G. Nelson, Director Teacher Education Research Center State University College Fredonia, New York 14063

#### INTRODUCTION

SURVEY - '71 FOLLOW-UP contains further interpretation of the information contained in SURVEY - '71 OVERVIEW. In this report, Fredonia data has been reported by the three academic areas of the College programs which are: Arts and Sciences (AS), Fine and Performing Arts (FA), and Professional Studies (PS). This breakdown provides an opportunity to interpret areas independently and to compare data with other major divisions within the College program.

Further comparison to a national study by the American Council on Education (ACE) is provided in the reference tables. For analysis with a national sampling of college students, the tables designate the sex of the respondents. The survey forms used in both studies include many identical items for comparison since the national questionnaire was adapted for the Fredonia study. The point of reference provides added dimension to the data.

#### CHAPTER I

### DESCRIPTION OF STUDIES

A questionnaire was mailed in January, 1972, to all SUC, Fredonia, recipients of the baccalaureate degree earned in January, May, or August, 1971. Date of entry into college was not used in selection for the mailing. The Fredonia survey was intended as a reflection of the experiences and views of those who had successfully completed degree work at Fredonia. The Fredonia report "SURVEY - '71" is available from the Teacher Education Research Center, Fredonia.

The national questionnaire was mailed in September, 1971, to a sample representing all students who entered college in 1967. Those who progressed through a "normal" four-year sequence were 1971 graduates. However, statistics are based on all 1967 freshmen rather than on only those who graduated. In the national survey, 59.2% of the 1967 freshmen had graduated. Selected statistics collected in 1967 are also offered. The national report "Four Years after College Entry" is available from the American Council on Education, Washington, D. C.

The two studies are generally comparable with respect to items and individuals surveyed. Differences in definition of the target groups require caution in some comparisons. Alternative interpretations are offered for selected examples to illustrate appropriate interpretations.

#### Fredonia Study

The Fredonia instrument, adapted from the questionnaire of the American Council on Education, has items which are unique to the interests and concerns of this College. SURVEY - '71 reflected the influence of the national study in choice of items designed to indicate the type of student enrolling in the institution, his reactions to the college years, and the effect of an education on his life style. Locating forty-five percent of the respondents who had changed addresses delayed many returns. Yet, a return of sixty percent was achieved in a five-month period.

#### Objectives

The objectives of the survey were to:

- identify the demographic and other characteristics of students attending the State University College, Fredonia,
- identify the reasons why students selected this particular college,
- 3. survey the types of positions graduates were accepting,
- 4. examine the relationship between college preparation and employment attainment,
- 5. explore suggested areas of instruction so that graduates may become more constructive contributors in society.

#### Respondents/Non-Respondents

The four hundred fifty who responded were compared with the three hundred who did not respond with respect to institutionally available data to test the possibility of response bias. The three categories used were major field area, sex, and cumulative grade point average.

Percentages of 1971 Graduates in Major Field Areas

Response Categories	Arts and Sciences	Fine Arts	Professional Studies	All Programs
	Percent	Percent	Percent	Percent
Respondents	59	56	62	60
Non-Respondents	41	44	38	40
Total	100	100	100	100

 $<sup>\</sup>chi^2$  = 1.790, p is not significant at the .05 level.

It can be concluded that the respondents are representative of the total graduating group as far as major field areas are concerned.

Percentages of 1971 Graduates by Sex

Response Categories	Male	Female	All Graduates
•	Percent	Percent	Percent
Respondents	59	61	60
Non-Respondents	41	39	40
Total	100	100	100

 $<sup>\</sup>chi^2$  = .449, p is not significant at the .05 level.

It can be seen that the respondent group is representative of total groups as far as distribution of sex is concerned.

- 3 -

# Percentages of Levels (low, average, high) of Grade Point Averages Attained by Graduates

Response Categories	High 3,25-4,00	Average 2.50-3.24	Low 2.00-2.49	Class of 1971
Respondents	60	62	56	60
Non-Respondents	40	38	44	40
Total	100	100	100	100

 $x^2 = 2.70$ , p is not significant at the .05 level.

The slight difference between the respondent and non-respondent groups is clearly not significant with regard to grade point averages.

Since there was no statistically significant difference between the respondent and non-respondent groups with regard to major field of study, sex, and grade point average, we can be reasonably confident that the respondent group is truly representative of the total graduating Class of 1971.

## National Study

For the past several years the American Council on Education, through its Cooperative Institutional Research Program (CIRP), has conducted a large-scale annual survey of freshmen entering college. Following a 1961 prototype study of 127,000 entering freshmen and a 1965 pilot study of 42,000 entering freshmen, full-scale surveys of more than a quarter million entering students have been undertaken each year since 1966. Through 1972, about two million college freshmen had participated

in the CIRP. Among the student participants, all full-time new freshmen enrolled in an institution providing representative or relatively complete coverage of the freshman student body were included in national norms compilations. National normative reports based on these compilations have been published annually by the American Council on Education.

The major purpose of this engoing survey and research program is to determine how students are affected by the colleges they attend. Consequently, subsamples of the original groups of participating students have been followed up periodically. These followup surveys consist in part of post-tests on selected items previously completed in the Freshman Information Form, and in part of items that cover student experiences and achievements, aspirations and plans for the future, perceptions and evaluations of the college environment, and educational outcomes and academic standing.

A total of 280,650 students at 359 colleges participated in the original survey of freshmen entering college in the Fall of 1967.

Because a number of participating institutions provided a sample of student respondents deemed unrepresentative of the institution's entire entering freshman class, weighted national normative tabulations were based on 185,848 first-time full-time freshmen from 252 institutions (46 junior or community colleges, 155 four-year colleges, and 51 universities). Weighting procedures deemed appropriate for statistical considerations were applied to the responses received.

#### CHAPTER !I

#### **OVERVIEW**

Responses to SURVEY - '71 are categorized by the three academic areas which SUC, Fredonia offers: Arts and Sciences (AS), Fine and Performing Arts (FA), and Professional Studies (PS). Fields within the academic disciplines are listed in Appendix II. Distribution, by major areas, of the sampling in comparison with the total population is indicated in Figure 1.

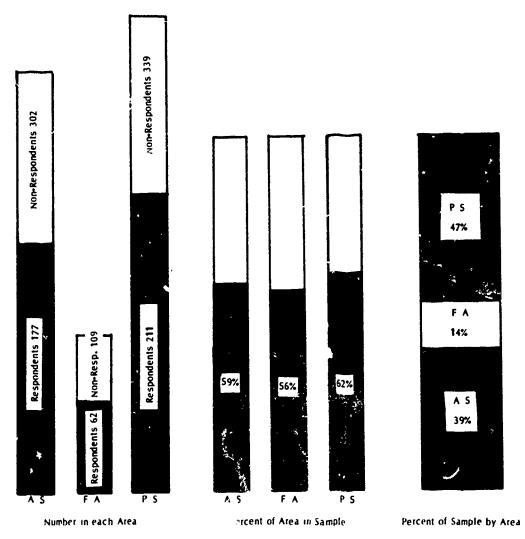

Figure 1. Categories by Major Fields

In some areas, the Fredonia study sought information which is not available nationally. Figures from both studies are used wherever possible. Section M of the Fredonia questionnaire is presented as Tables XIV, XV, and XVI as direct comparisons are inappropriate.

For comparison with the national report, the responses are categorized by sex.

The reference tables contained in Appendix i are divided into three sections which chronologically view the data under study.

#### Section One

This group of tables contains information about the entry characteristics of students.

Are the students who enroll at Fredonia similar to students across the nation?

Can reactions to a college program be attributed to differences in students attending Fredonia?

A partial answer to these questions, and others, can be found in Table I to Table VI which report independent variables. The table on enrollment is restricted to Fredonians and includes indicators of previous college affiliations. Over two thirds of the students had enrolled at Fredonia initially. They knew what kind of educational opportunities they wanted.

How does a prospective student select a college?

In the national study, students responded as entering freshmen and data from this survey is reported. Fredonia responses are from graduates and could be colored by time and recall techniques. (If time affects memory, some striking differences might be reflected in the data). Influences on selection of college include parents or relatives, cost of the college, and reputation in specific fields of study. Fredonia's programs within the area of Fine and Performing Arts are reflected in the numbers indicating reputation of the college as an influence.

#### Section Two

This section contains tables which consider involvement in and reaction to college life.

Do most college students have a career goal established?

Do students participate in organizations on campus?

How would students change the educational program?

Reactions to the college years can be found in Table VII to Table XVI. The reference table on academic change indicates that members of the national survey were not so committed to a degree or a career choice as members of the Fredonia program. Only 18 percent of the Fredonia graduates changed career plans. Career choices were confirmed prior to college entry. This is understandable since SUC Fredonia has a reputation as a "music school" and has always "trained" teachers.

Participation in student organizations is greater at Fredonia.

Totals for participation are twice that of the national survey. The program in Fine and Performing Arts is geared to active participation by students.

Fredonians are definitely vocal about ways of improving education at the college level. Reference Table X indicates consistently higher percentages of students who endorsed ways of improving education than were indicated in the national sampling. The influences of "teacher training" may be responsible for the sensitivity to educational practices.

Insight into the college life of students is found in this section of reference tables. Opinion reactions are consistent across the three major areas.

## Section Three

The last section of tables considers post-graduate aspirations, employment status and provides a retrospective view of college by the respondents.

What are the degree expectations of the graduates?

What are these people doing?

·· -

What personal objectives are considered important by the population?

A higher percentage of Fredonians expect to attain a master's degree than was indicated by members of the national survey. Educational demands of career choice are evident in the finding.

The largest occupational response is in the housewife-and/orstudent category in the national study. The highest occupational response area on the local survey is teaching at the elementaryschool level.

Respondents on both surveys feel a responsibility for their fellow men. There is a high correlation between the groups to indicate this. Many of the surveyed graduates felt it essential or very important to help others in difficulty. Personal attainment on each study ranks high in all categories but is far below the desire to assist others.

What are the retrospective views of college life?

Two open-ended items on the Fredonia questionnaire provided opportunities for comments on the college years and reactions to them. One opportunity followed a series of opinion statements on ways to

improve undergraduate education. Twenty-eight percent of the Fredonians took the opportunity to react. The nature of the item made the commentary constructive in nature. There were five major referral categories which evolved from a study of the responses.

Percentages of Topic Response (N = 127) by Major Field Areas on Ways to Improve Undergraduate Education.

Topic Categories	Arts and Sciences	Fine Arts	Professional Studies	Total Respo <b>ns</b> es
Administration	9	3	2	14
Education	20	11	28	59
General	10	2	4	16
Students	5	-	2	7
SURVEY - '71	2	-	2	4
Total	46	16	38	100

Topic titles include--

Administration: buildings and plant (development and growth),

employment and placement requirements,

records and registration, faculty requirements.

Education: class size, curriculum, general statements

on educational philosophy, evaluative systems,

schedules, teachers and professors.

General: personal reactions to college, community

involvement, international exposure.

Students: counseling and guidance,

professional opportunities.

Survey: reference to clarity and recommendations.

The second opportunity for comments came at the end of the Fredonia questionnaire. Thirty-one percent of the respondents took the opportunity to express personal reactions to their college experience.

Commentary covers a wide variety of interests and concerns. Topics range from personal problems of adjustment to "town and gown" relationships; from student independence to administrative fiat. SURVEY - '71 receives many comments, not only on format but as a procedural instrument.

To assist in coding objectively, the section was coded using the following key:

complimentary - which included only positive, nonsuggestive comments (e.g., I loved my college years.)

constructive - which included suggestions for remedying situations (e.g., A practical course for handling money is needed.)

critical - which included all negative statements (e. g., College courses are a bore.)

mixed - which includes combinations of 1 through 3.

A general topic heading of College Education drew the highest frequency of response in the complimentary category. Many graduates provide plans of action or suggest alternate possibilities for procedures in areas where it was felt that changes would be beneficial.

Course offerings, student relationships, and curriculum receive the greatest number of reactions.

The former Fredonians made critical and constructive suggestions for perfecting the educational process at the College. Ideas were expressed clearly and reasons were often given to reinforce their commentary. Table XVII to Table XXIV provide reference points on many phases of graduates' lives. For many, SURVEY - '71 is also an opportunity to recall the 'happy days.''

#### CHAPTER III

#### TECHNICAL CHARACTERISTICS OF THE STATISTICS

In "Four Years After College Entry," the national survey, the colleges were divided into several categories. For this report, respondents of the four-year colleges were compared to Fredonia graduates.

The precision of a particular percentage is a function of the number of respondents, the sampling procedure used, and the variability of the data. Other factors may also influence precision.

The national study references a table of precision estimates ranging from 0.044 to 1.000. Since the procedure for calculating a confidence interval is specific for each statistic, we have omitted the estimates. For this report all percentages are rounded to the nearest whole number. The suggestion is not implied that significance be attached to differences of one percent. Each comparison should be considered a separate case, but the casual reader would be well advised to require a substantial difference in percentage to suggest a meaningful educational difference. Caution should especially be exercised in interpretations of differences near the ends of the scale. Thus the difference between 1 and 6 percent is not so meaningful as the difference between 51 and 56 percent.

The national figures were weighted through a complicated series of regression analysis procedures to project the probable response of the total national population of 1967 freshmen. The results were based on 20,582 actual returns. No weighting procedures were used on the Fredonia data. All Fredonia figures were calculated from the total number of respondents. No correction for sampling is needed since the tests for response bias indicated that the 450 respondents fairly represent the 750 total. Errors introduced or corrected for by weighting the national sample cannot be estimated on the basis of available data.

The Fredonia survey is of 1971 graduates. The national survey is of those expected to graduate in 1971 based on entering as freshmen in 1967. The national study is restricted to the traditional pattern of four years to a degree. With the increased emphasis on "stopping out" and a variety of paths to an education, suitable caution is due in interpretation of the national data. The purpose of the national study is not to study the final product of an institution but, rather, to study students after four years of exposure.

#### CHAPTER IV

#### HIGHLIGHTS AND SELECTED INTERPRETATIONS

#### Highlights

The national sampling had a substantially higher percentage of students who were self-sufficient and/or had parental support for financing their education than the Fredomians.

Personal ambitions reveal a high percentage of Fredomians who are interested in creative and artistic achievement.

That undergraduate education would be improved if more courses were electives won the support of four times more Fredonians than national-study graduates.

Ways of improving undergraduate education which were approved by Fredonians included small classes, double majors, and independent study.

Over double the percentage of respondents from the national study dropped out of college temporarily in comparison with the 1971 Fredonia graduates.

Community service here or abroad was recommended by 27 percent more Fredonians than was indicated nationally.

Fredonians felt that undergraduate education would improve with more attention to the emotional growth of students.

Graduates, on both studies, indicated the importance, to them personally, of developing a meaningful philosophy of life.

Helping others who are in difficulty ranked very high as a personally important item to graduates locally and nationally.

Fredonia graduates had a greater percentage of respondents who were anticipating earning a master's degree than the graduates in the national study.

Most parents of the students were high-school graduates.

Graduates felt that colleges should be actively engaged in solving social problems.

Percentages of full-time and part-time employment for Fredonia were higher than for the national group.

Percentages indicating anticipated long-term careers in elementary education were three times greater among the Fredonia graduates than the national respondents.

## Interpretations of Selected Highlights

The concern expressed for financing education was difficult to interpret. Part of the national data was collected in 1967 upon entering college and the Fredonia data was collected after successful completion of a degree. The Fredonia data did not include those who had reason to be concerned and, in fact, did not succeed.

The annual income of parental families appears to be higher for Fredonians than for the national group. This difference may be a reflection of the inflation between 1967 and 1971 since the figures were collected at different times.

- 17 -

Fredonia graduates would clearly like more elective courses.

This concern applies to each classification used so it appears to be college-wide. Since each question in this category reflected greater concern at Fredonia than nationally, this finding may indicate simply greater awareness. Fredonia graduates are not hesitant to speak up.

The employment patterns of Fredonia graduates reflect the emphasis on preparation for teaching. Fredonia graduates have been successful in obtaining employment in education. Arts and Sciences graduates find employment in junior- and senior-high schools and in four-year colleges. The number of Fredonia graduates who do not plan to work is very small. The categories government, other non-profit, and business reflect no difference between Fredonia graduates and the national sample. Fredonia can take pride in the employment success of Fredonia graduates.

Fredonia graduates report higher degree aspirations than the national sample. The teacher employment situation is not likely the cause of this difference since there appears to be no difference between the areas at Fredonia. In the national sample, those who have not yet graduated might be expected to have lower degree aspirations. The difference might be attributable to differences in definition of the target samples.

Fredonia graduates changed their major field and changed their career choice less frequently than the national sample. One explanation for this finding could be that those who graduate are those who

change less. Another explanation could be that Fredonia offers more adequate early counseling, which obviates the need for changes later.

These highlights and interpretations are offered as samples of the type of information in the tables. The intention of the report is to provide background data to use in studying the reference tables.

### Appendix B

The fields of study within the three major disciplines available to 1971 undergraduate students at SUC, Fredonia are:

## Arts and Sciences (AS)

Biology Language, French

Business Administration Language, German

Chemistry Language, Spanish

Economics Mathematics

Economics--Business Administration Philosophy

English Physics

Geology Political Science

History Psychology

Sociology

## Fine and Performing Arts (FA)

Art

Music

Applied Music

History of Music

Theory of Music

Music Education (vocal, instrumental)

Music Performance (piano, voice)

Theatre Arts

#### Professional Studies (PS)

Elementary Education including Nursery--Grade Three

Speech and Hearing

## Appendix C

# TEACHER EDUCATION RESEARCH CENTER State University College at Fredonia

#### GRADUATE INFORMATION FORM

	Date of Birth Social Security Number
Address Correction (if necessary)	
maress correction (if necessary)	
Dear Graduate:	

Education for today's world is being challenged everywhere. Here, in Fredonia, the State University for age has indicated a concern for education in many ways. For example, this College initiated a President's Commission. Involving students, staff and community members to consider future educational possibilities, the group constituted one approach to securing information to assist in augmenting new ideas and in reinforcing commitments already established.

Another important way of collecting data is through canvassing graduates. The information we get will assist the College in adapting to the future in programming and in course offerings.

The College community and prospective graduates will benefit by your responses. Please complete and return "SURVEY - '71" as a contributor to the future of State University, College at Fredonia.

Sincerely,

Dallas K. Beal

Acting President, SUC, Fredonia

This student information form, SURVEY - '71, is being sent to all 1971 graduates in the baccalaureate degree program at State University College at Fredonia. As a segment of a nationwide survey, this adaptation, prepared by the Teacher Education Research Center, holds significance for campus-wide innovations and changes. It will take about fifteen minutes of your time. The information you provide will be used in coded form.

Helen McKee, Project Director Mildred Mills, Project Investigator Brien Murphy, Project Investigator

Direction	appreciated. Please: 1) Use a v to indicate answers. 2) Indicate markings clearly. 3) Erase cleanly any answer you wish to change.
Example:	I attended SUC, FredoniaYes No
Α.	Check only those that apply to you.
( 1) ( 2) ( 3) ( 4) ( 5)	1. SUC, Fredonia was the first college that I attended
В.	What is the highest academic degree that you intend to obtain? Check one.
( 6) ( 7) ( 8) ( 9) (10) (11) (12)	1. Bachelor's degree (B.A., B.S., etc.)
С.	Did you have any concern about your ability to finance your college education? Check those that apply.
(13) (14) (15) (16) (17) (18) (19)	1. Yes, some concern
D.	Please check all items that have applied to you during the period from June, 1971 to the present time.
(20)	1. Attending college: summer session
(21) (22) (23) (24) (25) (26) (27) (28)	2. Attending adult education courses (in area high school)

E. Who is your employer now? Whom do you expect to be your long-run career employer? Check as many as apply.

			Present	Long-Run
(29)		1.	Government:	
(30) (31)			Federal (incl. military)	z) y)
(32)		2.	Education:	
(33) (34) (35) (36) (37) (38)			Preschool and/or kindergarten	z) y) x) w) v) u)
(39)		3.	Other non-profit organizations:	
(40) (41) (42) (43)			Hospital, clinic	z) y) x) w)
(44)		4.	Business, industry and services:	
(45) (46) (47)			Self-employed	z) y) x)
(48)		5.	Other (incl. student, housewife) a)	z)
(49)		6.	None (do not plan to work)a)	z)
	F.	Ansv	ver the following items that apply to you.	
		1.	What was your major field for undergraduate degree?	
			a. As an undergraduate were you involved in independen study?	t 
		2.	Are you enrolled in graduate study?	
			a. If so, what is your major field?	

		3.	Are you teaching this school year?
			a. What is your specific teaching assignment?
			b. Are you teaching in a Parochial School, public school, private school, other? (please indicate)
			c. Are you teaching in the area of your major concentration?
			d. Are you teaching on Supplementary Service Certificate?
			e. How long a teaching career do you anticipate?
		4.	If your current position is not teaching, what are you doing?
			a. Are you utilizing your area of major concentration?
	G.		is the highest level of formal education obtained by your nts? Check one in each column.
			<u>Father</u> <u>Mother</u>
50) 51) 52) 53) 54) 55)		1. 2. 3. 4. 5. 6.	High school graduate
	н.	fami	is your estimate of the total income last year of your parental ly (not your own family if you are married)? Consider annual me from all sources before taxes. Check one.
56) 57) 58) 59) 60) 61) 62) 63) 64)		2. 3. 4. 5. 6.	Less than \$4,000 \$4,000 - \$5,999 \$6,000 - \$7,999 \$8,000 - \$9,999 \$10,000 - \$14,999 \$15,000 - \$19,999 \$20,000 - \$24,999 \$25,000 - \$29,999 \$30,000 or more I have no idea

J.	Indicate the	importance to	o you persona	lly of the	following 1	persons
	or events in	your decision	n to enroll a	t College.	Check one	for
	each item.	•
